

SET-UP INSTRUCTIONS FOR CHAUVET SLIM PAR 56

* We recommend testing a few lights before your event date, so you are comfortable with the operation before taking them to your event. *

1) Please carefully transport lights in the included boxes to prevent damage. It is common for the plastic covers to crack during shipping. This is expected, and totally okay. No damage fees will be charged for the covers cracking.

2) Remove light unit from box and plug in to a wall outlet using the provided AC cord.

* You can plug one light into the next creating a long chain of lights. *

3) Wait a few seconds for the light to load up. (it should light up once it receives power).

4) Using the digital display on the back of the light, select the color you want:

step 1: Press the Menu button a few times until you see the letter C.

step 2: Press the up or down arrow buttons until you get the color you want.

step 3: Press the Enter button to select and set the color.

Optionally, you can also select a pattern which will make the lights automatically change through colors. To select a pattern, use the same process as selecting a specific color but select P instead. The sound activated program is popular and can be selected using P5.

5) Pack up all the lights and power cables and carefully pack them back into the boxes. Attach the included UPS pre-paid shipping label to the boxes and drop them off to UPS.

For advanced users wanting to utilize the DMX features, or for general troubleshooting, please refer to User Manual which can be found online.
