

SET-UP INSTRUCTIONS FOR UV BLACK LIGHTS

* We recommend testing a few lights before your event date, so you are comfortable with the operation before taking them to your event. *

* Black lights are indoor use only. Do not expose to water or moisture of any kind. Do not place drinks or other containers with moisture on or near the black lights. If moisture does get in or on the black light, immediately unplug it from the power outlet. *

1) Please carefully transport lights in the included boxes to prevent damage. It is common for the plastic covers to crack during shipping. This is expected, and totally okay. No damage fees will be charged for the covers cracking.

2) Remove light unit from box and plug in to a wall outlet using the provided AC cord.

* You can plug one light into the next creating a long chain of lights. *

3) Wait a few seconds for the light to load up. (it should light up once it receives power).

4) Using the digital display located on the back of the unit, press MENU to access the menu system. Press UP or DOWN to go through the possible modes. The modes are:

UL- :: Dimming

FLAS :: Strobe

FAdE :: Fade

SouF :: Sound Activated

5) Press ENTER to select the currently displayed mode that you want to use.

6) Press ENTER to set the speed for your selected mode.

7) Use the UP or DOWN buttons to set the value for the mode. The values for the Dimming, Strobe and Fade modes adjust the speed of the effect.

8) After your event, pack up all the lights and power cables and carefully pack them back into the boxes. Attach the included UPS pre-paid shipping label to the boxes and drop them off to UPS.

For advanced users wanting to utilize the DMX features, Master/Slave Mode, or for general troubleshooting, please refer to http://www.prolightingrental.com/instructions/uv_black_lights
